

AMAN SONI

Project Coordinator | Associate Product Manager | Tech Operations

Ghaziabad, India (Open to Remote) · +91 8527100401 · amansoni4144@gmail.com · [LinkedIn](#) · [Live Product](#)

PROFESSIONAL SUMMARY

Results-driven tech professional with hands-on experience leading end-to-end product delivery and coordinating cross-functional teams. Shipped Reflecta a live, cloud-deployed AI product managing the full project lifecycle from requirement gathering to production release, on schedule and within scope.

Led a 170+ participant development bootcamp as Student Head, achieving a 100% project completion rate through proactive milestone tracking and stakeholder coordination. Skilled in Agile methodologies, risk identification, stakeholder communication, and data-driven decision-making bridging the gap between technical teams and business objectives.

CORE COMPETENCIES

Project Management: Project lifecycle management (initiation → planning → execution → closure), risk management & mitigation, stakeholder management, resource & timeline planning, retrospectives.

Product Management: Product roadmapping, requirement gathering, competitive analysis, user-centric decision making.

Methodologies: Agile(Scrum) , Lean.

Tools: Notion, GitHub, Postman , Figma (basic).

Technical Fluency: Python, REST APIs, SQL (basic), cloud deployment (Vercel), Supabase (PostgreSQL), AI/LLM integrations

Soft Skills: Cross-functional coordination, stakeholder communication, conflict resolution, documentation & reporting.

PROJECT & PRODUCT EXPERIENCE

Project Lead & Product Owner — Reflecta (AI SaaS Application) · Feb 2026 – May 2026

Tools: Notion · GitHub · Vercel · Supabase · FastAPI · OpenRouter API | Live: reflecta-seven.vercel.app

- Owned the full project lifecycle from initiation (requirements & scope) through planning, build, QA, and production release delivering on schedule, solo, with zero scope creep.
- Defined user stories, acceptance criteria, and a 3-phase feature roadmap, prioritizing by user impact vs. engineering effort.
- Managed stakeholder decisions across infrastructure, security, and AI vendor selection evaluated and selected Supabase + Vercel for cost-efficiency and almost zero-downtime deployment.
- Identified and mitigated a critical post-launch production risk (IPv6/Supabase incompatibility) through root-cause analysis, restoring full service with zero user-facing downtime.
- Built an LLM abstraction layer enabling seamless model-switching (Gemma → Gemini Flash) reducing future vendor-switch effort to near zero, improving technical resilience.
- Documented architecture decisions and deployment and also maintaining clear project documentation throughout the lifecycle.

Backend Lead & Coordinator — Digital Virtual Hotel Card System · Sep 2025 – Oct 2025

Stack: Java · Spring Boot · REST APIs · QR Code Generation · Security Protocols

- Led backend architecture for an enterprise-grade hospitality system, translating business requirements (contactless guest access) into a detailed technical specification and delivery plan.
- Coordinated across security, access control, and API sub-systems managing dependencies and sequencing work to avoid blockers.

- Engineered QR-based access lifecycle management (issuance → activation → suspension → expiry), improving security response accuracy by 30%.
- Delivered sprint milestones, produced final project documentation, and conducted handoff aligned to stakeholder sign-off criteria.

LEADERSHIP & COORDINATION

Student Head — Full-Stack Development Bootcamp (170+ Participants) · 2025

- Planned and coordinated one week bootcamp for 170+ students managing trainer scheduling, session sequencing, venue logistics, and resource allocation end-to-end.
- Acted as primary liaison between industry trainers and academic participants, resolving blockers proactively and maintaining stakeholder alignment throughout.
- Tracked participant progress against weekly milestones using a structured checklist system achieved 100% project completion rate across all cohort members.

PORTFOLIO

Live Case Study: Reflecta — AI Cognitive Journal | reflecta-seven.vercel.app

Product built solo from scratch: defined scope → designed architecture → shipped to production. Full lifecycle documented. Covers user auth, AI pipeline, cloud deployment, and incident resolution.

PRD / Documentation: Product requirements doc, feature roadmap, and risk log available on request.

Case Study 2: BuildThis — AI-Powered Problem Discovery Platform | Status: Actively Building (Functional Backend Prototype)

A crowd-sourced platform connecting real-world problem owners with developers seeking meaningful projects. Solves the “tutorial hell” gap by transforming vague, messy problems into structured, production-ready technical blueprints via an AI Architect Engine.

Role: Solo Founder & Lead Architect — owning product strategy, user flow design, AI pipeline architecture, database schema, and YC-aligned go-to-market planning.

Key Features: AI Articulation Assistant (messy input → formal technical requirement), AI Problem Analyzer (deep technical + market report per problem), community voting for quality curation.

Stack: Python/FastAPI • LangChain + Groq (Llama 3.3) • PostgreSQL/Supabase • Next.js + Tailwind CSS

Current Phase: Functional prototype with working AI-refinement pipeline and DB persistence. PRD, technical architecture, and go-to-market roadmap 100% complete. Pre-deployment — targeting first public release 2026.

EDUCATION

Master of Computer Applications (MCA) · Expected June 2026

INMANTEC Institutions (AKTU) — Ghaziabad, UP · Aggregate: 76.0%

Bachelor of Computer Applications (BCA) · 2021 – 2024

Sunder Deep Group of Institutions (CCSU) — Ghaziabad, UP · Aggregate: 69.94%

Honors: Ranked #1 in BCA 3rd Year (entire batch) for technical leadership and project excellence — concurrent with leading a 170+ student bootcamp as Student Head.
